Who we are

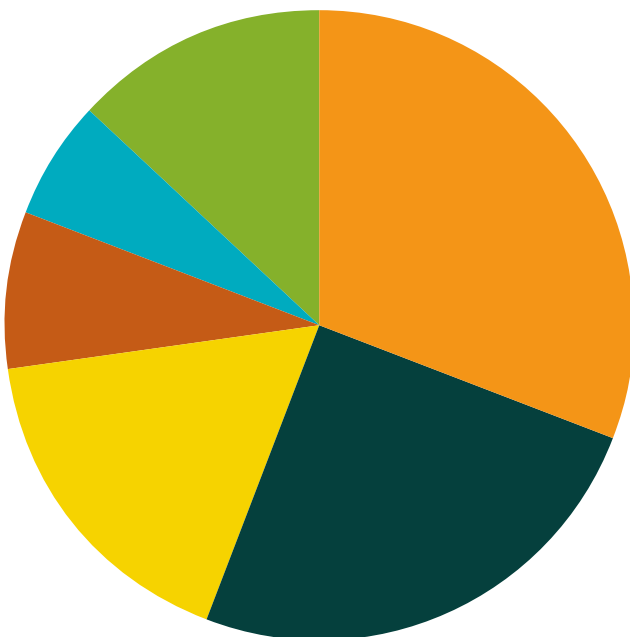

With hundreds of members in over 50 countries worldwide, the World Biogas Association comprises the broadest and most authoritative network of expertise in anaerobic digestion (AD) and complementary technologies. We provide countless opportunities to make professional connections and access peers through in-person and online forums.

WBA members represent both national and regional biogas trade associations, as well as international companies, governmental and municipal organisations across Africa, Europe, Asia, the Americas, and Oceania.

We are the premier source of global information on plant optimisation, regulation and standards, policy and training for the entire industry. Our members benefit from exclusively compiled and curated data, resources, enterprise solutions and advocacy, all provided by us to help improve our members' business performance. The WBA Council acts as a bridge to our members, sharing updates, helping to shape our mission and partnering with us in our quest to grow biogas' footprint around the world.

The WBA community

WBA provides opportunities that enhance every aspect of market and professional development. Discover the most comprehensive collection of resources designed to help you and your organisation succeed, complemented by direct support from our policy and technical specialists.

Members are kept informed of WBA activities through alerts, briefings, guidance notes, market reports and industry and association newsletters.

Sectors served

- AD Operators/Developers
- Finance
- Energy Networks
- Fleet Management
- Local, Regional & National Governments
- Agriculture
- Wastewater Treatment
- Waste Management
- Landfill Gas Operators/Developers
- Heavy Industry
- Environmental/Professional Services/Consultants
- Food & Drink Manufacture

Your Membership Benefits

WBA membership delivers unparalleled access to policy, technical and regulatory expertise on standards and best practice through an extensive array of association resources and discounts, including:

- **Technical Expertise:** WBA's dedicated team of technical and engineering experts are on hand to answer your questions and provide guidance – whether it's a feedstock issue or improving plant efficiency, we have the knowledge to help you improve our members' performance.
 - **Policy Guidance:** our team of policy and regulatory analysts are on hand to guide you on the relevant political and market landscape from the markets you are keen to be involved in – whether as an investor, a site operator or a service supplier, our insights will help guide your business decisions.
 - **News, Analysis & pricing:** our in-depth analysis of stories and topics shaping the green energy landscape give you the insights and competitive advantage you need. And our monitoring of global commodity pricing brings the trends that guide your investment decisions to your fingertips daily.
 - **WBA Library:** Offers direct access to an ever-expanding library of landmark reports, market intelligence, industry briefings and guidance notes.
- **Training:** Discounted access to WBA's portfolio of training and development programmes, spanning a variety of topics and sectors.

and benefit from
unparalleled global insights

"We really thank the entire WBA team for the great commitment and important support provided to the biogas sector, as well as for the networking and exchange of technical knowledge opportunities that they constantly make available to their members."

Montello S.p.A.

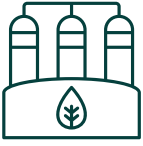

Shaping the future

Through a strategic and initiative-taking approach to **#MakingBiogasHappen**, the WBA influences global policies and regulations, sets standards and provides knowledge exchange, to fast-track the development of AD and complementary technologies, open new markets and promote the industry's growth on both a global and regional scale. Our strategic approach includes:

- **Access to Networks:** Affording access to the largest global networks of expertise across multiple geographies, industries, political and financial institutions.
- **Advocacy and Standards:** Proactively supporting and collaborating with member National Associations in lobbying national and regional governments and developing a universal framework of standards, aligned to training and data collection protocols, in support of a rapid roll-out of a high performing industry.
- **Integrated Campaigns:** Initiating integrated political and industry campaigns through the publication of landmark reports, market intelligence, data analysis and political initiatives, such as the Paris Declaration (lodged with the UNFCCC).
- **Knowledge Exchange and Thought Leadership:** Delivering knowledge exchange and thought leadership through a tiered engagement approach, including Members' Meetings, Working Groups, Sector Interest Groups and Roundtables, to open and advance new markets and advise on operational best practice and policy/finance mechanisms.
- **Global Events:** Co-hosting the annual World Biogas Summit & Expo, the largest global event dedicated to AD and biogas, a platform for networking, showcasing industry advancements and fostering collaboration on a global scale.
- **Country-Specific Programmes:** Organising and hosting the World Biogas Congress Series, a programme of country-specific events in partnership with National Associations and key industry partners, supporting countries in developing roadmaps for the adoption, scaling up and professionalisation of the biogas industry.
- **Promotion:** The WBA promotes the value of the biogas industry to national and global policymakers by addressing legislative and regulatory issues affecting scale up. Member working groups inform the WBA positioning on these strategically important international forums.
- **Association Memberships:** The WBA is an accredited member of the **UNFCCC**, a founding member of the **Global Biofuels Alliance**, and formal partner of the **Climate & Clean Air Coalition**, **C40 Cities Network**, **Global Methane Initiative** and **Biofuture Campaign** hosted by the **Clean Energy Ministerial**. The WBA is an official Observer of the **Global Bioenergy Partnership** of the **UN Food and Agriculture Organisation** and **Climate Technology Centre Network Advisory Board** Meetings. The WBA is working closely with **Global Methane Hub**, a philanthropic organisation funding projects that will help deliver the **Global Methane Pledge**.

#MakingBiogasHappen

By recycling the 105 billion tonnes of organic wastes generated by human activity every year, we can stop the immense pollution and climate change impact they have by turning them into valuable products to support countries' energy and food security and contribute to the development of a global bioeconomy.

To accelerate this development, the WBA has pioneered **#MakingBiogasHappen** - a landmark international initiative which will serve as the industry blueprint to:

- Benchmark minimum operating standards and performance indicators across the design, build and operation of AD plants.
- Empower governments and regulators to adopt the frameworks necessary to ensure all collectable organic wastes are recycled through AD.
- Integrate data analytics across the technology and performance of AD plants to provide evidence against benchmark environmental KPIs.
- Deliver a data strategy which allows the industry blueprint to be adopted into national bioenergy plans and secure evidence for countries (and companies) to optimise revenues from carbon pricing regimes.
- Deliver a comprehensive education, information and training platform to develop a professionalised workforce and facilitate rapid integration into the AD industry of workers migrating from sectors such as oil and gas.
